Item specifics

Condition: **Used** :

Seller notes: "In good condition and in full working order."

Brand: Cisco Tandberg

MPN: CTI-VCS-BASE K9 - TTC2-04

TANDBERG

Cisco Tandberg TTC2-04 TelePresence Video Communication Server

Tandberg Model: TTC2-04

Cisco Part Number: CTI-VCS-BASE K9

In good condition and full working order

Included

- 1 x Cisco Tandberg TTC2-04 TelePresence Video Communication Server CTI-VCS-BASE K9

Description

The Cisco TelePresence® Video Communication Server (Cisco VCS) software simplifies session management and control of telepresence conferences. It provides flexible and extensible conferencing applications, enabling organizations to benefit from increased employee productivity and enhanced communication with partners and customers.

The Cisco VCS delivers exceptional scalability and resiliency, secure communications, and simplified large-scale provisioning and network administration in conjunction with Cisco TelePresence Management Suite (Cisco TMS).

The Cisco VCS interworks transparently with Cisco® Unified Communications Manager (Cisco Unified CM), bringing rich telepresence services to organizations with Cisco Unified CM. It also offers interoperability with third-party unified communications, IP telephony networks, and voice-over-IP (VoIP) systems.

Features and Benefits

- Greater reach: Any-to-any interoperability facilitates smooth video communications between standards-based and third-party client users.
- Highly scalable: With features such as clustering and policy services integration, the Cisco VCS is architected to support enterprise growth, with smooth expansion as usage increases, protecting investment in video infrastructure.
- Extended telepresence capability: Integration with Cisco Unified CM helps reduce complexity for users and facilitates interworking between SIP- and H.323-compliant endpoints within an enterprise, regardless of individual endpoint capabilities.
 - Secure: The industrially recognized secure performance of Cisco VCS provides administrators with complete confidence in their network security.
- Extensible: Part of a firewall traversal solution with Cisco VCS Expressway, Cisco VCS Control provides rich, video-enabled collaboration for remote workers and for business-to-business applications.
 - Flexibility: Administrators can implement the Cisco VCS as either an appliance or a virtualized application to meet the needs of their organizations.

Features of Cisco VCS Control follow:

- SIP registrar, SIP proxy server, presence server, and presence user agent: The Cisco VCS supports the SIP protocol, acting as a SIP registrar, storing the Address of Record of registered endpoints, and forwarding SIP requests as a SIP proxy server. The Cisco VCS supports the SIP for Instant Messaging and Presence Leveraging Extensions (SIMPLE) protocol, and can act as a presence server and presence user agent.
 - H.323 Gatekeeper: The Cisco VCS provides H.323 Gatekeeper functions. It accepts registrations from H.323 endpoints and provides call-control functions such as address translation and admission control.
- Interoperability and Interworking: The Cisco VCS provides interoperability between SIP and H.323 standards-compliant endpoints and supports communication with IBM Lotus Sametime and Microsoft Lync environments including Microsoft Lync 2013 (H.264 SVC) clients.
- Zone and bandwidth management: The Cisco VCS supports management of the allocation of bandwidth between sites, endpoints, and groups of endpoints. You can specify the amount of bandwidth available for intra- and interzone calls, allowing you to control the way in which bandwidth is used and calls are prioritized. Features of the Cisco VCS bandwidth management capability include the following:
 - Flexible, customizable zone configuration with named zone and default zone
 - Bandwidth management on both a per-call and a total-usage basis, configurable separately for calls within local subzones and to neighboring systems and zones
 - Automatic down-speeding option for calls that exceed the available bandwidth
 - Preconfigured defaults for:
 - Cisco Unified CM neighbor zones
 - Cisco TelePresence Advanced Media Gateway
 - Microsoft Lync neighbor zones
 - Nortel Communication Server neighbor zones
- Dial-plan and call-routing control: The Cisco VCS allows administrators to create dial plans to define the way in which calls are handled within the network. Transforms can be applied to source and destination address information to define general routing rules. Dial plans can be based on call aspects such as:
 - Source or destination address, zone, or subzone configuration
 - Call policy for authenticated or nonauthenticated endpoints
 - FindMe configuration
- Authentication: You can configure the Cisco VCS to allow both authenticated and unauthenticated endpoints to register to the same VCS, and to subsequently control the operation of those endpoints based on their authentication status. The Cisco VCS supports:
 - H.235 authentication
 - SIP digest authentication
 - Windows NT LAN Manager (NTLM) authentication
 - Control over which endpoints are allowed to register through allow and deny lists
 - Microsoft Active Directory (AD) integration for Cisco Jabber Video™ for TelePresence (Movi™) users
 - Administrator authentication through Active Directory
 - Integration with Lightweight Directory Access Protocol (LDAP)-accessible H.350 directories
- Policy services: A policy services interface is available to allow you to define call policies to be applied within your organization. For example, you can handle calls differently according to time of day, source or destination address, or more complex algorithms. The policy services interface supports Call Processing Language (CPL).
 - Clustering: The Cisco VCS can function as a standalone system or in a cluster configuration for increased capacity and redundancy.
 - Administration: The Cisco VCS provides administrative interfaces to allow setup, administration, and monitoring of the network configuration.

Specifications

Product Feature	Product Specification
User Interface	
Web browsers supported	<ul style="list-style-type: none"> • Web interface support for Internet Explorer 8 or 9; Firefox 3 or later; and Chrome
Management interfaces	<ul style="list-style-type: none"> • Support for industry standards such as Secure HTTP (HTTPS), XML, Simple Network Management Protocol (SNMP v2 and v3), secure copy protocol (SCP), and Secure Shell (SSH) Protocol • Embedded setup wizard for initial configuration • Integration with Cisco TMS Version 13.2 or later for scalable provisioning and configuration • Call logging and advanced diagnostics support
Languages supported	<ul style="list-style-type: none"> • English, Chinese (Simplified), French, German, Japanese, Korean, Russian and Spanish
Endpoint Registration and Session Management	
Supported endpoints	<ul style="list-style-type: none"> • Cisco VCS is compatible with any standards-compliant H.323 or SIP videoconferencing or telepresence device; provisioning and configuration supported only for Cisco TelePresence endpoints
Endpoint registration	<ul style="list-style-type: none"> • Support for manual registration of H.323 and SIP endpoints • Support for registration of H.323 ID and E.164 aliases and services
Session control	<ul style="list-style-type: none"> • Support for Unicode (UTF-8) registration for global implementation • Support for H.225/Q.931 and H.245 call-control routed mode and non-call routed mode • Support for H.323-SIP Interworking Encryption • Support for H.323-SIP Interworking DuoVideo • Support for Uniform Resource Identifier (URI) dialing • Support for direct call signaling among neighbored Cisco VCSs, border controllers, and gatekeepers • Support for call policy management (RFC 3880), including call policy and user policy (FindMe) • Support for conference hunting for multipoint-control-unit (MCU) clusters • Support for call routed mode • Support for call loop detection • Support for remote zone monitoring • Support for remote zone redundancy
Zone control and bandwidth management	<ul style="list-style-type: none"> • Support for up to 1000 neighbor zones (including Cisco VCSs, border controllers, gatekeepers, and SIP proxies) • Support for subzone area definition for bandwidth management • Support for flexible zone configuration with named zones and default zone • Support for forwarding of requests to neighbor zones • Support for registration control (open, specifically allow, and specifically deny) • Support for interzone bandwidth management: definable call by call • Maximum bandwidth per call • Maximum aggregate bandwidth for all neighboring zones • Support for intrazone bandwidth management: definable call by call • Maximum bandwidth per call • Maximum aggregate bandwidth • Support for auto-down-speeding if call exceeds per-call maximum • Support for gateway load balancing • Support for automatic network failover • Support for capacity warnings for users and administrators
Network	<ul style="list-style-type: none"> • Support for Domain Name System (DNS) addressing • Support for IPv4 and IPv6 simultaneously • Support for IPv4 and IPv6 translation services
Scalability and Capacity	
Single VCS capacity: (appliance or small and medium virtual-machine deployments)	<ul style="list-style-type: none"> • The capacity of one Cisco VCS (appliance or small and medium virtual machine) follows: • Up to 2500 registrations • Up to 500 nontraversal calls • Up to 100 traversal calls • Up to 1000 subzones
Single VCS capacity: (large virtual-machine deployments)	<ul style="list-style-type: none"> • The capacity of one Cisco VCS (large virtual machine) follows: • Up to 5000 registrations • Up to 500 nontraversal calls • Up to 500 traversal calls • Up to 1000 subzones
Clustered VCS capacity	<ul style="list-style-type: none"> • Up to six VCS appliances or virtual machines can be clustered to increase capacity and provide redundancy. • Clustering increases the maximum registrations, traversal, and nontraversal calls by up to four times.
Microsoft Lync Interworking Capacity	<p>The maximum number of calls interworked to Microsoft Lync is 100. It is highly recommended that a separate VCS Control server is deployed for use as a dedicated Microsoft Lync gateway.</p>
System Security and Resilience Security features	<ul style="list-style-type: none"> • Secure management with HTTPS, SSH, and SCP • Secure file transfer • Inactivity timeout • Built-in firewall configuration rules • Ability to lock down IP services • Requirement for authentication on HTTP(S), SSH, and SCP • H.235 authentication support • Transport Layer Security (TLS) for SIP signaling • Roles-based password-protected GUI user access • Ability to enforce strict passwords • Ability to disable root access over SSH • Automated intrusion protection • Supports delegated credential checking across a traversal zone with Cisco VCS Expressway • Federal Information Processing Standards (FIPS) 140-2-compliant cryptographic modules

Resilience and reliability

- Ability to deploy in six-redundant cluster
- Ability to share licenses across a cluster
- Ability for registrations to survive system restart
- Ability to replicate configuration for clusters
